

Stouder Morty Is Now A Millionaire Sire!

0200H000044 Stouder **Morty** EX recently surpassed the one million-dose mark, joining the elite ranks of Millionaire Sire Status at the Semex Alliance. This well-known and popular sire resides at Eastern Breeders Inc (EBI), in Kemptville, Ontario, and has been in high demand around the world producing over 1,000,000 doses to date.

Born on May 25, 1995 at Stouder Holsteins in Wendell, Idaho, USA, Morty joined Semex's USA proving program, Premier. In February 2002 he made his debut on the TPI charts at #6 and maintained his top rankings, rising to #1 TPI in February 2003.

Morty's daughters have been known as high producers with terrific udders and feet & legs for structurally correct, long-lasting cows. In Canada alone Morty has 15,678 daughters classified with nearly 60% GP or better, and 16,689 daughters average ME of 11,864 3.6 % 423 3.1 % 366 kg.

"Morty sires cows that dairymen everywhere can appreciate," says Pierre Laliberte, Senior Vice-President, Global Genetic Programs/Operations. "His daughters work hard in every environment, making him one of our most popular sires available today. With over 100 Morty sons at The Semex Alliance yet to receive their first proof, we will feel Morty's influence for generations to come."

Ron Stewart, EBI's Manager of Farm Operations states, "Morty, at 10 years of age, is still healthy. He's an athletic, agile bull that has always been an aggressive eater, yet good to work with."

"Morty holds the EBI record for most doses made in one day (August 28, 2007 - 4,146 doses). It is rare to see a bull that has been able to meet the demands that he has and exceed them for as long as he has," observes Jason Cratchley, EBI Laboratory Supervisor. "Morty has been our most consistently shipped bull over the past few years, while demand for him over the past few months is as high as it's been at anytime," states Chris Peters, EBI Distribution Supervisor.
